

The diagram illustrates a 3D convolutional layer with 3 parallel processing paths. Each path consists of a 3D input volume, a 3D convolution kernel, and a 3D output volume. The input volumes are labeled with their dimensions (height, width, depth) and the number of operations (ops). The convolution kernels are labeled with their dimensions and the number of operations. The output volumes are labeled with their dimensions and the number of operations. The paths are connected by a central vertical line, indicating a shared or parallel processing structure.

Path 1 (Left):

- Input: ops2 144, wght 100, wdth 50
- Kernel: ops2 144, wght 400, wdth 50
- Output: ops2 144, wght 1000, wdth 50

Path 2 (Middle):

- Input: ops2 144, wght 100, wdth 100
- Kernel: ops2 144, wght 400, wdth 100
- Output: ops2 144, wght 1000, wdth 100

Path 3 (Right):

- Input: ops2 144, wght 100, wdth 125
- Kernel: ops2 144, wght 400, wdth 125
- Output: ops2 144, wght 1000, wdth 125

Path 4 (Bottom Left):

- Input: ops2 14, wght 100, wdth 50
- Kernel: ops2 14, wght 400, wdth 50
- Output: ops2 14, wght 1000, wdth 50

Path 5 (Bottom Middle):

- Input: ops2 14, wght 100, wdth 100
- Kernel: ops2 14, wght 400, wdth 100
- Output: ops2 14, wght 1000, wdth 100

Path 6 (Bottom Right):

- Input: ops2 14, wght 100, wdth 125
- Kernel: ops2 14, wght 400, wdth 125
- Output: ops2 14, wght 1000, wdth 125

Path 7 (Far Bottom Left):

- Input: ops2 8, wght 100, wdth 50
- Kernel: ops2 8, wght 400, wdth 50
- Output: ops2 8, wght 1000, wdth 50

Path 8 (Far Bottom Middle):

- Input: ops2 8, wght 100, wdth 100
- Kernel: ops2 8, wght 400, wdth 100
- Output: ops2 8, wght 1000, wdth 100

Path 9 (Far Bottom Right):

- Input: ops2 8, wght 100, wdth 125
- Kernel: ops2 8, wght 400, wdth 125
- Output: ops2 8, wght 1000, wdth 125
